ABOUT US

Safer Storage Systems (SSS) is an Australian owned and operated storage solutions provider.

With decades of experience and specialist teams in place, Safer Storage Systems engineers and implements fully-optimised storage facilities across Australia, New Zealand and the USA.

The team is passionately manufacturing pallet racking locally, in Australia, and continuously invests in developing new and innovative warehouse solutions - all while taking positive steps towards a more sustainable future.

OUR SERVICES

- End-to-end warehouse solutions
- Warehouse data analysis and modelling
- Bespoke storage solutions design & installation
- Pallet racking manufacturing
- Robotics, automation and integration
- Mezzanine, shelving systems & conveyors
- Line markings, labelling & building certification

Solutions without boundaries.

SOLUTIONS WITHOUT BOUNDARIES

Pictured from left to right: Matt Bell (SSS Managing Director), Brian Howson (GMH Chief Technical Officer), Glenn McKenna (SSS Operations Manager), Tony Bell (SSS Director), James Hardy (SSS Sales Director) and Sergio Rodriguez Cuesta (GMH CEO).

"We are focused on creating long-term, aligned partnerships with suppliers and end-users.

Quality product is certainly at the core of what we do, but it takes more than materials to create leading storage solutions – it takes exceptional people, strong industry partnerships and experience."

Matt Bell
Managing Director

OUR PARTNERSHIP WITH GONVARRI MATERIAL HANDLING

Gonvarri Material Handling (GMH) is one of Europe's leading engineers and manufacturers of storage solutions with global coverage.

Safer Storage System are the exclusive Australian supplier of the GMH range which includes premium steel pallet racking and shelving systems, as well as storage machines and automatic systems.

COMMITTED TO A MORE SUSTAINABLE FUTURE

Safer Storage Systems is committed to reducing carbon emissions across the organisation, as well as on an individual level.

With a number of sustainability-focused initiatives in action, we're passionate about creating a positive environmental impact to benefit current and future generations.

We are committed to reducing waste and our carbon footprint by making meaningful changes to our supply chain, business activities and manufacturing practices. This includes our Silverline® product range as well as the broader range of products we offer.

AUSTRALIAN MADE PALLET RACKING

4-WEEK LEAD TIMES

Silverline Pallet Racking

AUSTRALIAN MADE AND OWNED

DESIGNED IN EUROPE. MADE IN AUSTRALIA.

Brighter, stronger, greener and made in Australia, our Silverline® Pallet Racking offers more than your average racking. Developed in partnership with Gonvarri Material Handling, Silverline® can be produced locally on demand to bespoke lengths and heights.

BESPOKE SOLUTIONS - SHORTER LEAD TIMES

BRIGHTER

Galvanised beams offer enhanced visibility through the warehouse for increased safety and peace of mind.

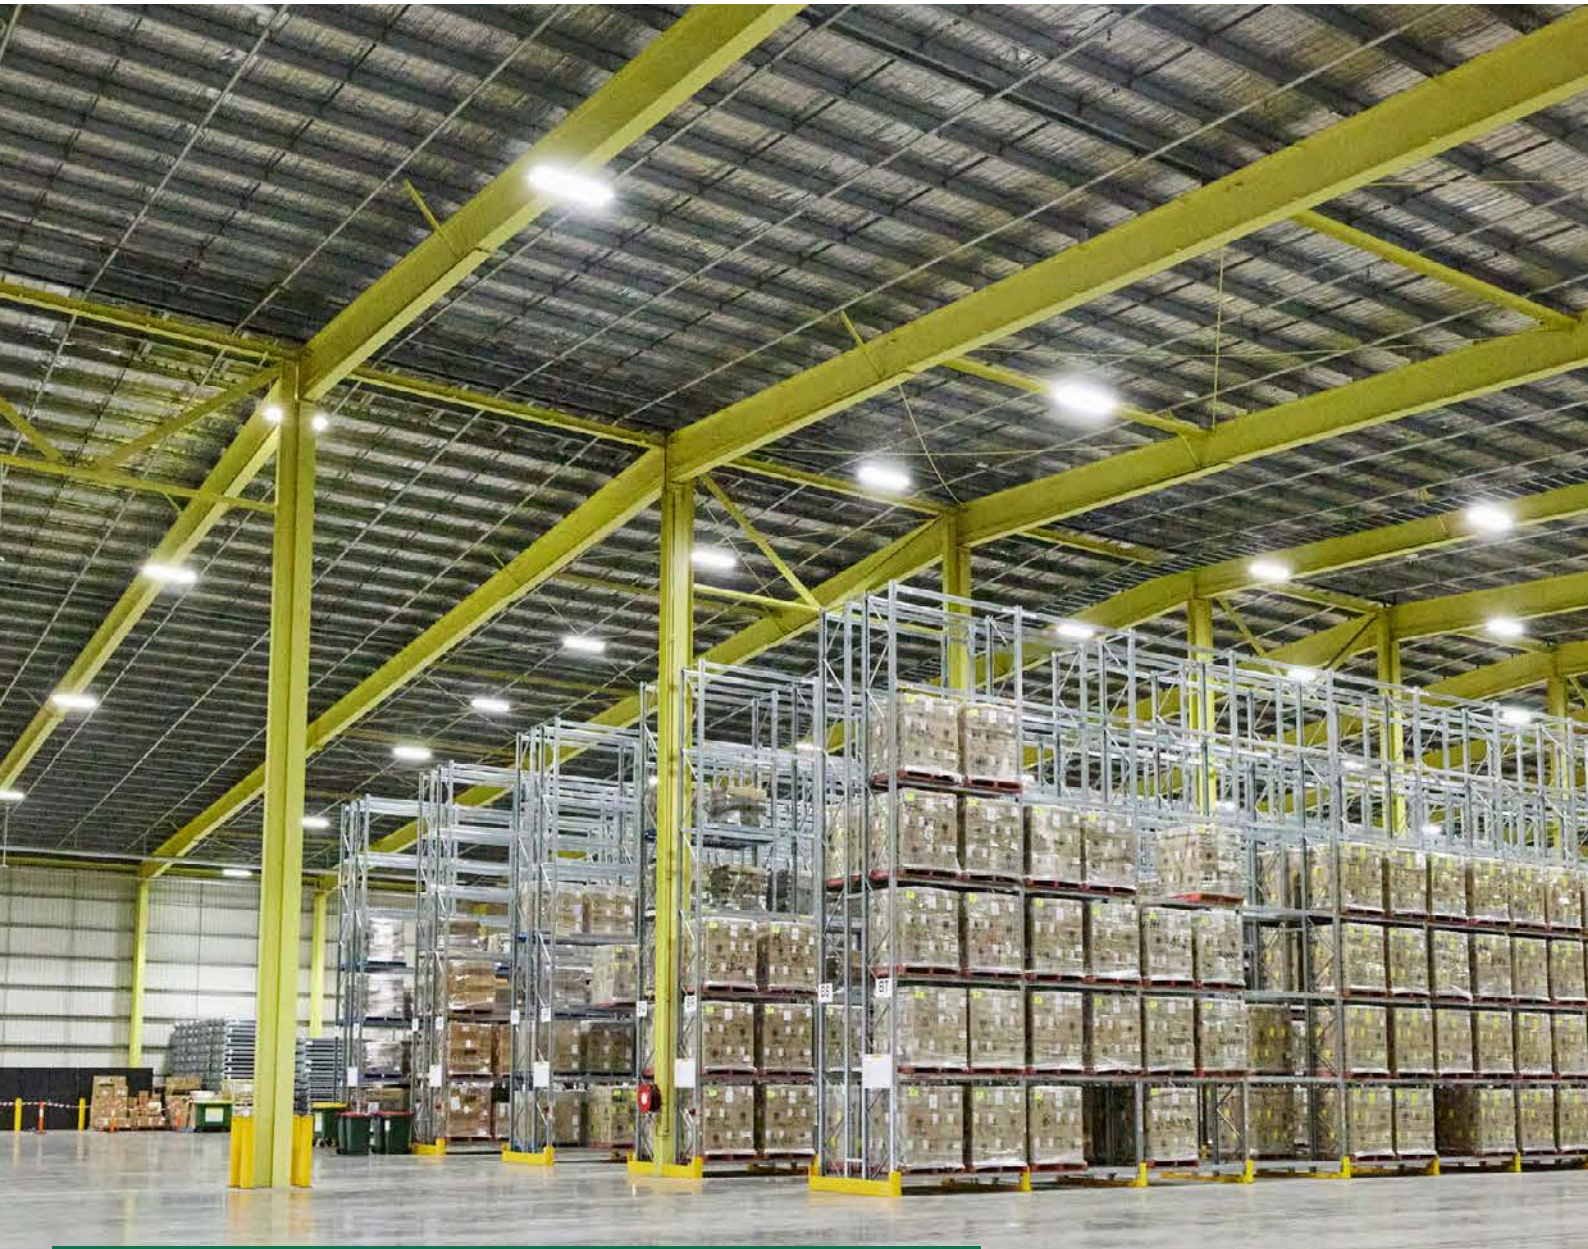
STRONGER

High-grade and high-tensile steel that lasts longer, doesn't corrode and looks better longer.

GREENER

Our manufacturing process produces fewer emissions than powder coated beams plus no overseas freight equals a product that's better for the environment.

SOLUTIONS WITHOUT BOUNDARIES

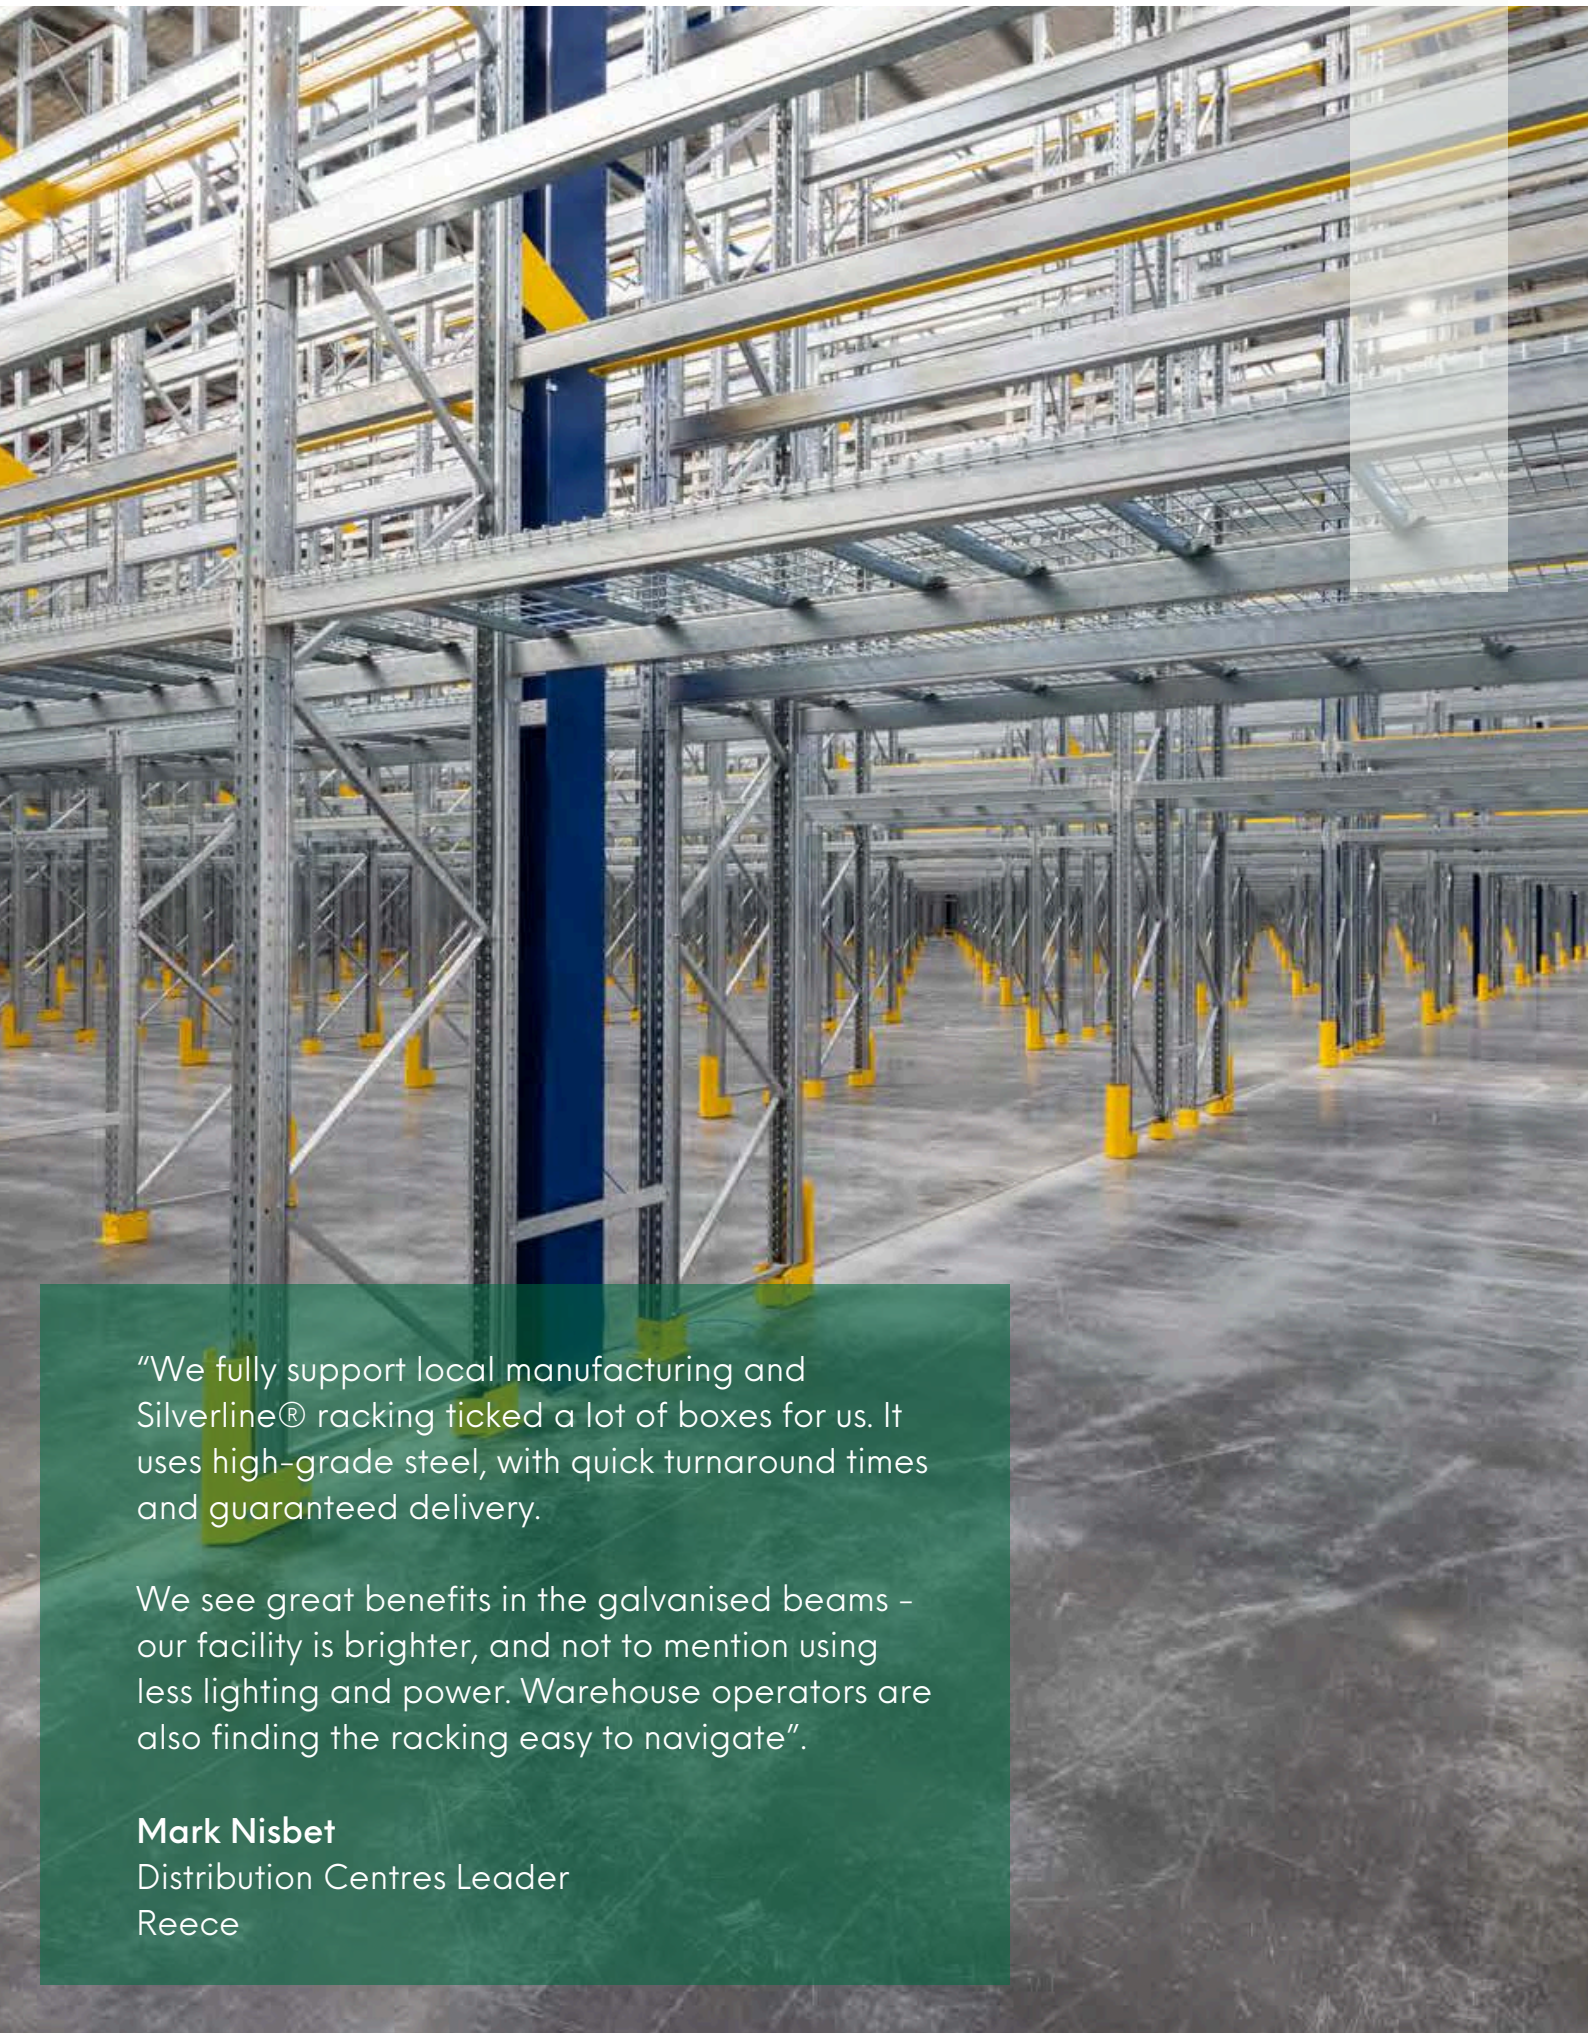


"Sustainability is a big focus for us.
Opting to use SSS Silverline Pallet Racking helped prevent 60.3 tonnes of CO2 from entering the atmosphere.

Our big chiller facility has no natural light, but looks much brighter now with Silverline® Racking. Our operators prefer the galvanised beams as it makes the safety accessories and shelf labels really pop."

Shane J Burge
Supply Chain Manager
Chobani

SOLUTIONS WITHOUT BOUNDARIES



"We fully support local manufacturing and Silverline® racking ticked a lot of boxes for us. It uses high-grade steel, with quick turnaround times and guaranteed delivery.

We see great benefits in the galvanised beams - our facility is brighter, and not to mention using less lighting and power. Warehouse operators are also finding the racking easy to navigate".

Mark Nisbet
Distribution Centres Leader

TAKING STORAGE SOLUTIONS TO THE NEXT LEVEL

RAISED STORAGE AREAS

A mezzanine or raised storage area (RSA) can expand the space and functionality of a warehouse. A structural mezzanine offers a heavy duty capacity with clear span areas below. Rack or shelving based mezzanine floors offer a more cost effective way to increase storage capacity.

SCALABLE SHELVING SYSTEMS

Our modular shelving systems can be fully customised to any space & requirements. Great for organising and storing small parts, cartons, or files.

CONVEYORS

Low voltage conveyor systems improve flow and enhance the ergonomic profile of a warehouse. From conveyor belt and roller systems to reversible spiral conveyors, SSS can create a solution which best fits the business needs and goals.

SCALABLE ROBOTICS & AUTOMATED SOLUTIONS

With a full suite of mobile robots and automated systems, Safer Storage Systems creates smart, safe and efficient warehouse solutions which can be integrated with new or existing storage solutions. Businesses benefit from improved warehouse efficiency, greater accuracy and a reduced storage footprint. Our robotics and automation solutions can also be powered by solar energy to reduce the environmental impact.

FASTER THROUGHPUTS

Optimise picking and packing times for a more efficient warehouse.

ACCURATE

Minimise errors in picking and know the exact location of every product in your warehouse at any one time.

SMALLER FOOTPRINT

Fit more in with solutions that can considerably reduce your storage footprint.

AGV

AGV (Automated Guided Vehicle) automatically transfers standard bins/pallets. It adopts high precision laser SLAM navigation, vision navigation, and can adapt to different carriers.

CTU

CTU (Carton Transfer Unit) is an automated unmanned picking and handling robot. It can transfer multiple goods simultaneously improving picking efficiency and storage capacity.

AMR

AMR (Autonomous Mobile Robot) has an optimised motion performance and enhanced safety protection. It helps create a safer working environment and more cost-effective productivity.

SMART UNIVERSAL INTEGRATION

Our intelligent central control software integrates with most robotics and automated systems and bridges the gap between data and enabling technology.

Not only able to manage automated warehouse functions, it adapts to real-time changes to create the most efficient warehouse processes.

VISUALISATION AND MODELLING

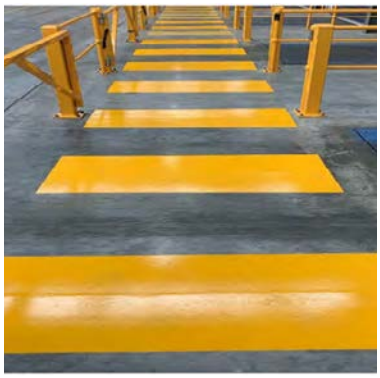
Prior to commencing a storage solution design, SSS look at multiple aspects of a business using data, logic and observation. This ensures each solution is backed by qualified information – not guess work.

Comprehensive visualisations, simulations and modelling can help bring to light any storage flow issues prior to installation commencing, ensuring the most efficient layout possible.

COMPLETE SOLUTIONS

SOLUTION DESIGN

Using a combined approach to plan storage layouts and equipment means you can fit more in and increase functionality.



TRAFFIC MANAGEMENT

SSS plan and implement comprehensive traffic management solutions, considering inbound and outbound goods areas, staging areas, as well as pedestrian and forklift paths.

LABELLING

Customisable warehouse labels with barcodes, QR codes, sequential numbering to quickly and efficiently identify every item.

RACK PROTECTION

Protect your investment with a range of smart, heavy duty rack protection solutions. From aisle end protection, as well as front and back upright protection to back stops, bollards and more.

PERMITS & CERTIFICATION

Benefit from a turnkey warehouse solution which includes permits and building certification ensuring any business can move in and function at 100% from day one.

SAFETY AUDITS & SIGNAGE

Safety is one of the most important considerations. SSS provides complete rack safety signage and conduct regular safety audits to help avoid any serious incidences in the warehouse.
